

High Precision Rifle Manufacturer

Anti-Material & Sniper Rifle

MODERN AGE SYSTEM
For Today's Unconventional Battlefield

PRODUCT KEY POINTS

- GM6 Lynx is the most advance ANTI-MATERIAL and SNIPER RIFLE with the world's first RECOIL REDUCTION SYSTEM .
- GM6 Lynx is a revolutionary, unique new weapon combining light weight (10.5 kg empty weight) with portability, mobility (transporting length 914mm - combat length 1114mm) and heavy fire power in calibres 12.7x99 mm NATO and/or 12.7x108 mm Russian (Both calibre in one rifle. It can be altered from NATO to Russian calibre with the change of the barrel and magazine, no tools needed).
- To these features adds the ultra-low recoil (less, than that of a 12 gauge shotgun) and the unique adjustable muzzle-break.
- The shooter can disembark and embark any vehicles (including normal cars, helicopters, APCs...) and the rifle can be deployed with parachute units.
- Due to the special design of the rifle (bull-pup design combined with long recoil) it can be changed from transport to combat position by the push of a button (including cocking and loading) within less than a second, enabling the shooter to open fire immediately even in standing or kneeling positions.

PRODUCT USE INFO

GM6 Lynx

- Anti-Material Capabilities
 - Armoured Steel
 - Light Structures (from 100 meters)
 - Penetrates Thick Cement Blocks (250 mm thick)
 - *Penetrates Reinforced Walls* (2mm steel then filled with 10 mm of sand then final 8 mm of armour steel)
 - Vehicles
 - Light utility jeeps
 - Logistics vehicles
 - Lightly armoured infantry vehicles
 - Aircrafts
 - Light aircraft
 - Helicopters
- Sniper Capabilities
 - One minute of angle accuracy
 - Fast deployment ideal for convoy and urban environments
 - Easily carry and shoot from helicopters

REDUCED RECOIL

GM6 Lynx

REDUCTION OF RECOIL

- Recoil barrel system acts like a "artillery" howitzer barrel, greatly reducing the firing recoil.
- Recoil of the rifle operation is reduced by the "barrel recoil reduction" system that is proprietary to our rifle.
- Reduced recoil speeds up the follow up 2nd and 3rd shots as required.
- Reduced recoil improves accuracy of the rifle by lower impact to the shooter's shoulder.

MULTIPLE FIRING POSITIONS

GM6 Lynx

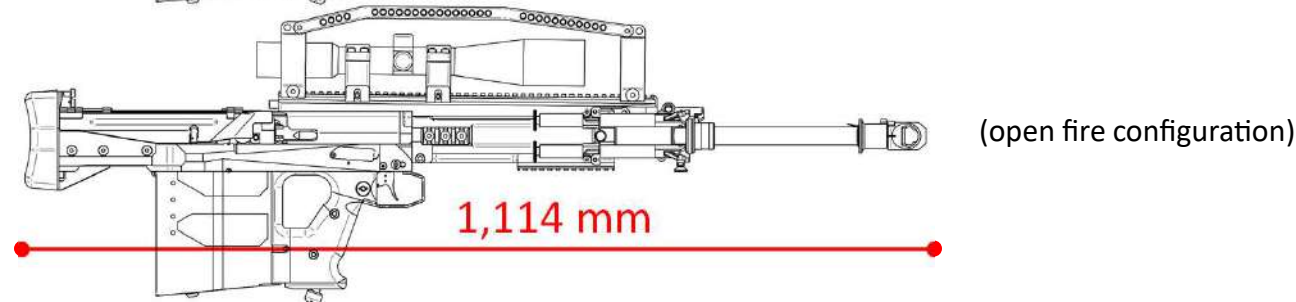

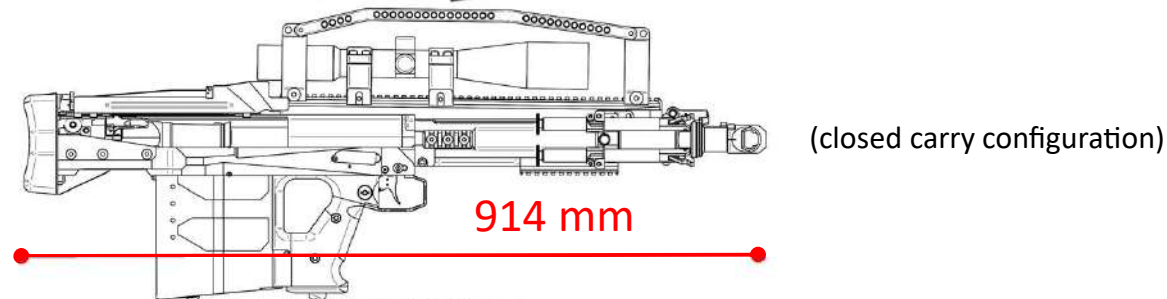

EASY & ACCURATE

- The shortened barrel carry mode allows for the shooter to easily walk, hike and run with the rifle.
- Upon identifying the target, the shooter can employ the anti-material & sniper rifle from standing, kneeling and prone positions.
- The rifles proprietary recoil system allows for a shooter to keep accurate shooting from standing and kneeling unlike all other heavy rifles of the modern world.
- Our rifle is truly the solutions for todays mobile battlefield.

OPERATIONS COMPARISON

GM6 Lynx

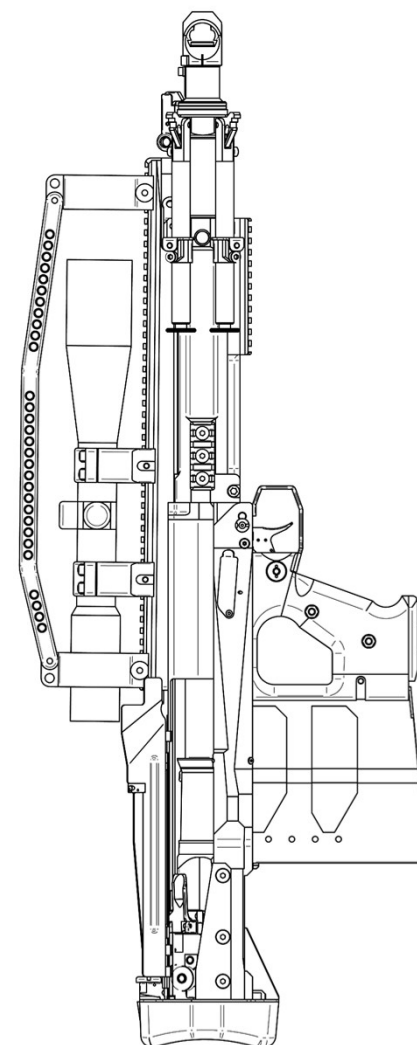

Modern Rifle

- Smaller size in rifle than standard HK G3 battle rifle.
- Allows for shooter to carry the rifle in Urban areas, On Helicopters, In Vehicles and or any tight spaces.
- Accuracy surpasses the current modern materials and sniper rifle.

SPECIFICATIONS DATA

GM6 Lynx

GM6 Lynx	Anti-Material & Sniper Rifle
Empty weight:	10,5 kg
Combat weight:	13 kg
Full (combat) length:	1114 mm
Length in portable state (barrel pushed in):	914 mm
Length of barrel:	730 mm
Muzzle energy:	14,5 Kj
Muzzle velocity:	from 780 m/s
Effective shooting range:	2000 m+
Design:	Bullpup
Magazine:	Straight, 5 round
Cartridge:	12,7 x 108 and/or .50 Browning
Accuracy:	<1MOA
Operation:	semi-automatic

Dispersion test from 100m

GM6 Lynx

Ammo: Jaguar .50 special

Day sight: Dedal DH 5-20x56

Accurate Small
Shot Group

2018 August

Hit from 1600m
